## SKIN CONSULTATION & DIAGNOSIS

A thorough assessment is a vital step in skin treatment and product selection. This detailed skin assessment helps us determine what is best for you, and provide you with the understanding of how to best look after your skin.

## PLATELET RICH PLASMA (PRP)

The therapy improves lines, wrinkles and texture with a gradual natural change. The therapy is also helpful for treating skin conditions and for general skin reconditioning. The most dramatic results so far have been seen with improvement of crepe skin problems in areas such as the neck, under eyes and décolletage areas.

## MICROCURRENT

Microcurrent therapy is a relaxing, painless and nonsurgical procedure to give a rehydrated younger looking and lifted look with visible difference just after one session. Microcurrent therapy reduces wrinkles and fine lines, dark circles and puffiness around the eyes, acne and contracts the enlarged pores, tightens the skin and improves the muscle tone to give firm, hydrated and youthful skin. It even reduces numbness, swelling and pain and helps in quick recovery after a facelift or other plastic surgery procedures.

## FACIAL ENHANCEMENT

Nonsurgical facial enhancements are non-invasive procedures that can provide the same rejuvenated younger look as surgical procedures with less or no recovery time and at less cost.

Nonsurgical facial enhancement can remove wrinkles and fine lines, reduce scars, enhance the shape of the lips, improve contour by filling shallow areas on the cheeks and below the eyes using dermal fillers or skin resurfacing techniques.

## ANTI-WRINKLE INJECTIONS & DERMAL FILLERS

Anti-wrinkle injections are indicated to smoothen and eliminate forehead lines, frown lines, crow's feet and neck bands. These anti-wrinkle injections give you a more relaxed, yet expressive face. At Restore, we use European and American products which are both approved by Australia Food and Drug Administration (FDA)

## TEAR TROUGHS

Tear troughs may be treated by injecting a dermal filler into the depressed area above the bony eye socket and massaging it into the fatty tissues to fill in the loose skin and hollow areas, and conceal dark circles. The entire procedure takes about 1 hour to complete. The procedure is painless as the filler contains an anaesthetic. About 1 ml of filler is usually sufficient for both eyes and your doctor will ensure that it evenly distributed, giving your eyes a natural healthy appearance. The procedure is minimally invasive and does not produce scars.

## NOSE RE-SHAPING

Non-surgical nose reshaping procedure involves the use of dermal filler injections to achieve the desired contour of the nose. It is used to build the bridge of the nose. It is used to build the bridge of the nose, improve the shape and height of the tip of the nose, even out the nose hump and correct small defects of rhinoplasty.
