Surgical Procedures

In addition to our non-surgical procedure we offer a range of cosmetic and skin cancer surgery procedures performed by Cosmetic Surgeon Dr Michael Xu.

Breast Augmentation

- ◇ Enhance the size & shape of woman's breasts using silicone implant
- ◇ Infra-mammary, peri-areolar or armpit approach

Fat Transfer to the Breast

- ◇ Autologous fat transfer is a safe alternative to breast implant surgery.
- ◇ involves extracting fat by a process called liposuction from another part of your body (generally from abdomen, thighs or buttocks) and using it for re-injection into the breast area.

Thread Lift

- ◇ An aesthetic treatment that helps you look younger, fresher and more appealing.
- ◇ A thread lift is a minimally invasive and safe procedure that confers permanent results for sagging skin.
- ◇ The Aesthetician uses clear polypropylene threads with tiny barbs on it to pull the sagging facial skin on the cheeks, eye-brows and neck, giving a smooth, fresh, rejuvenated and younger look.

Liposuction

- ◇ Liposuction will reduce excessively stubborn localised fatty areas where dieting and exercise have failed.
- ◇ Also used in combination with other procedures such as abdominoplasty (tummy tuck) where specific fatty areas can also be contoured.
- ◇ Facelift can also be improved by liposuction by removing fat from under the chin and neck and to enhance the jawline.

Upper eyelid skin reduction surgery

- ◇ also called upper eyelid lift surgery
- ◇ correct the puffiness, sagging and drooping of the upper eyelids
- ◇ improves the appearance of your eyelids and the area around it to give you a more youthful and relaxed look.

Asian Rhinoplasty

- ◇ A surgical procedure to enhance and reshape an appearance of the nose.
- ◇ An augmentation procedure that uses different implants or autologous tissues to improve aesthetic look of the nose

Asian double-eyelid surgery

- ◇ create a pretarsal crease in the upper eyelid which is normally absent from birth in people of Asian origin.
- ◇ The lack of a pretarsal crease may cause an un-aesthetic appearance of puffy upper eyelids and a tired look.
- ◇ Asian blepharoplasty gives your eyes a brighter look and also makes the application of eye makeup easier.
